

naadir

a New approach on architectural drawings
integrating computer descriptions

Naadir is a research project that proposes a new extended perspective system, which gathers linear, spherical, and cylindrical perspectives. The objective is to provide computational perspective drawings with some of the flexibility inherent of hand-made design sketches. This work was carried out by a multidisciplinary team of researchers.

Project *Naadir* research project
Years 2010-2013
Centers FA/UL, FC/UL
Funding FCT (PTDC/AUR-AQI/098388/2008)
